

## French company MC2 Technologies unveils the latest developments for its SPART technology.

- SPART solution is an intelligent jamming device that aims to protect its users from the triggering of one or more IEDs via the neutralisation of communication protocols with the remote control.
- SPART covers all threat bands.

Last October, the company extended its range of applications with the introduction of SPART, a technology for countering radio-controlled improvised explosive devices (RC-IEDs), and is now back at Eurosatory with a mature, ready-to-use product.

Within a few months, SPART has gone from a proof of concept to an operational product. With major improvements in its performance and ergonomics, MC2 Technologies has positioned this brand new system as a state-of-the-art technology in the field of countering RC-IEDs.

True portable electronic warfare (EW) system, SPART offers significant protective coverage around its operator to ensure his safety by preventing communication between the trigger and its improvised explosive device.

Broadband system (100 MHz to 7.125 GHz), SPART covers the entire threat spectrum including low-power, short-range RF devices, 2G to 5G systems and ISM devices.

Combining unique know-how and expertise, SPART is a compact system with a reduced weight of less than 3kg.

To keep up with the evolution of telecommunications, the company's research and development teams are continuously working on upgrading the SPART while seeking to optimise size and weight factors.

As an expert in the field of microwaves applied to the defence, security and telecommunications sectors, MC2 Technologies offers anti-drone, anti-RC-IEDs and real-time object detection solutions for the protection of airspace, operational personnel, citizens and infrastructures. With its experience in the development of innovative systems, its know-how and its mastery of advanced jamming and detection technologies, MC2 Technologies is a recognised player in the field of security and defence, having been awarded the French PARADE contract as a supplier of intelligent jamming systems.

**Nicolas VELLAS** : *"The market in which we operate is constantly evolving and therefore requires companies to be able to innovate and industrialise ever more rapidly while guaranteeing the flawless reliability of the systems produced. MC2 technologies meets these requirements. »*
